IMPORTANT NOTICE: The World Health Organisation (WHO) has recommended that pregnant women and new mothers be informed on the benefits and superiority of breastfeeding – in particular the fact that it provides the best nutrition and protection from illness for babies. Mothers should be given guidance on the preparation for, and maintenance of, lactation, with special emphasis on the importance of a well-balanced diet both during pregnancy and after delivery. Unnecessary introduction of partial bottle-feeding or other foods and drinks should be discouraged since it will have a negative effect on breastfeeding. Similarly, mothers should be warned of the difficulty of reversing a decision not to breastfeed. Before advising a mother to use an infant formula, she should be advised of the social and financial implications of her decision: for example, if a baby is exclusively bottle-fed, more than one can (400 g) per week will be needed, so the family circumstances and costs should be kept in mind. Mothers should be reminded that breast milk is not only the best, but also the most economical food for babies. If a decision to use an infant formula is taken, it is important to give instructions on correct preparation methods, emphasising that unboiled water, unsterilised bottles or incorrect dilution can all lead to illness. • SMA® PRO Follow-on Milk is only suitable for babies over 6 months as part of a mixed diet. It should not be used as a substitute for breast milk during the first 6 months of life. The decision to start weaning or to use this product before 6 months, should be made only on the advice of a doctor, midwife, health visitor, public health nurse, dietitian or pharmacist, based on baby’s individual needs. • SMA® PRO Gold Prem 1 is more appropriate.

- SMA® PRO Breast Milk Fortifier is a nutritional supplement designed to be added to expressed breast milk for the dietary management of preterm and low birthweight babies who are not solely fed breast milk. • SMA® PRO Gold Prem 1 is a special formula intended for the dietary management of preterm and low birthweight babies who are not solely fed breast milk. • SMA® PRO Gold Prem 2 is a special catch-up formula intended for the dietary management of mild to moderate cows’ milk allergy. It is suitable as the sole source of nutrition up to 6 months of age, and in conjunction with solid food up to 3 years of age. • SMA® Alfamino® is a special formula intended for the dietary management of severe cows’ milk allergy and/or multiple food allergies. It is suitable as the sole source of nutrition up to 6 months of age, and in conjunction with solid food up to 3 years of age.
